EDUCATION

Vishwakarma University, Pune 2023 – 2027 (Expected June 2027)
B.Tech in Computer Engineering | CGPA: 7.77/10 (through Semester 6)

EXPERIENCE

BuySellTips Financial Research Pvt. Ltd. Jul 2025 – Present
Software Development Intern, Data & AI *Pune, India*

- Built a quality gate for LLM-generated equity research reports in Python and PostgreSQL, combining a deterministic rule engine with a batched LLM classifier that routes each section to block, review or publish; an audit of 15 reports (547 sections) caught 28 false claims and 11 placeholder-figure clusters.
- Ran 6,998 automated checks over 341 sections for $0.047 total with 0 failed calls and 0.36 s median latency by batching and de-duplicating LLM calls (26% fewer); threshold calibration halved the human review queue (753 to 357) while raising accuracy from 17/21 to 19/21.
- Owned the Australian market launch of the earnings-call report pipeline (Neo4j, Qdrant, AWS S3): 62 reports in one batch with 0 failures and 100% QC pass; cut LLM cost 60% with vector retrieval and batch runtime from ~90 to ~25 min by sharding work across processes.
- Shipped a 10-Q peer-benchmark report product from spec to production in ~2 weeks: 64 reports with 64/65 passing QC for $4.93 total model spend, using SQL peer selection and cached per-filing extraction.
- Raised the global earnings-calendar match rate from 23% to 96% across 1,207 companies and cut unmatched companies from 738 to 34 with a fault-tolerant 3-source fallback (vendor data, Nasdaq API, per-company lookup).
- Debugged recurring overnight production data corruption through database forensics and cron/timezone analysis, tracing it to an undocumented AWS Fargate scraper; de-duplicated ~27K stale records per run, leaving 0 wrong-year dates.
- Replaced a fixed-sleep orchestration step with result polling and retries, cutting daily missing-filing rejections from 56 to 0.

Better Technology Labs LLP Jun 2025 – Jul 2025
Software Engineer Intern *Pune, India*

- Developed a Django employee management system with authentication, role-based access and reporting; sped up MySQL batch jobs with multiprocessing.

PROJECTS

Serverless Bond-Price Pipeline (BuySellTips) *Python, AWS Lambda, Docker, Selenium, PostgreSQL, boto3*

- Built an orchestrator that pulls pending bond CUSIPs from PostgreSQL, splits them into batches of 10 and fans them out as asynchronous AWS Lambda invocations running containerised headless Chrome to collect daily FINRA price and yield data.
- Made re-runs safe with idempotent *ON CONFLICT* upserts and automatic session refresh with bounded retries.

On-Demand IPO Ingestion on AWS EC2 (BuySellTips) *Python, AWS EC2, Bash, cron, PostgreSQL, OpenAI Agents SDK*

- Automated daily NASDAQ IPO ingestion: cron starts an EC2 instance, runs the Python loader with idempotent merges into PostgreSQL and LLM enrichment for newly listed companies only, then stops the instance and emails a run report (~4 min per run; 0 failures in 7 of 8 logged runs).
- Designed a flock-based lease protocol so 3 scheduled jobs share one EC2 instance safely, with a reaper capping idle-instance cost at ~30 min.

Touchstone: Self-Verifying Financial Data Pipeline *Python, FastAPI, SQLite, OpenAI API, pytest*

- Built a verification layer for SEC EDGAR 13F data that proves, auto-corrects or holds each row, catching 5 of 5 planted faults (ticker renames, a 1,302x currency-unit error, stale feeds, amended filings); LLM-proposed checks go live only after AST allowlisting, sandboxed replay and human approval.

GeoTrade: Supply-Chain Exposure Map *Python, FastAPI, PostgreSQL/PostGIS, React, Docker*

- Consolidated 29,442 raw listings from 6 stock markets into 23,020 unique, geocoded companies (0 validation errors), served by a 25-table PostGIS schema and a FastAPI service measured at 2–4 ms.

HeyVanilla: Personal Productivity Platform *Next.js 14, TypeScript, Supabase, Docker*

- Built a 15+ module full-stack app secured with row-level security on all 20 tables, session middleware and CSP/HSTS headers.

TECHNICAL SKILLS

Languages: Python, Java, SQL, TypeScript, JavaScript, Bash | **CS:** DSA, OOP, DBMS, OS, Networks
Backend & Web: FastAPI, Flask, Django, Spring Boot, Node.js, React, Next.js, REST APIs
Databases: PostgreSQL, MySQL, SQLite (SQL); Neo4j, MongoDB, Qdrant (NoSQL / vector)
Cloud & Tools: AWS (Lambda, EC2, S3, Fargate), Docker, Linux, Git, pytest, Selenium, OpenAI & Anthropic APIs
