Pune, India | +91 7020767107 | priyankabana0408@gmail.com | linkedin.com/in/priyankabana | github.com/priyankabana

EDUCATION

Vishwakarma University, Pune 2023 – 2027 (Expected June 2027)
B.Tech in Computer Engineering | CGPA: 7.77/10 (through Semester 6)

EXPERIENCE

BuySellTips Financial Research Pvt. Ltd. Jul 2025 – Present
Software Development Intern, Data & AI *Pune, India*

- Built a quality gate for LLM-generated equity research reports in Python and PostgreSQL, combining a deterministic rule engine with a batched LLM classifier that routes each section to block, review or publish; an audit of 15 reports (547 sections) caught 28 false claims and 11 placeholder-figure clusters.
- Ran 6,998 automated checks over 341 sections for $0.047 total with 0 failed calls and 0.36 s median latency by batching and de-duplicating LLM calls (26% fewer); threshold calibration halved the human review queue (753 to 357) while raising accuracy from 17/21 to 19/21.
- Owned the Australian market launch of the earnings-call report pipeline (Neo4j, Qdrant, AWS S3): 62 reports in one batch with 0 failures and 100% QC pass; cut LLM cost 60% with vector retrieval and batch runtime from ~90 to ~25 min by sharding work across processes.
- Shipped a 10-Q peer-benchmark report product from spec to production in ~2 weeks: 64 reports with 64/65 passing QC for $4.93 total model spend, using SQL peer selection, cached per-filing extraction (255 filings reused) and pre-screening of 508 companies.
- Raised the global earnings-calendar match rate from 23% to 96% across 1,207 companies and cut unmatched companies from 738 to 34 with a fault-tolerant 3-source fallback (vendor data, Nasdaq API, per-company lookup).
- Debugged recurring overnight production data corruption through database forensics and cron/timezone analysis, tracing it to an undocumented AWS Fargate scraper; de-duplicated ~27K stale records per run, leaving 0 wrong-year dates.
- Replaced a fixed-sleep orchestration step with result polling and retries, cutting daily missing-filing rejections from 56 to 0.
- Automated daily NASDAQ IPO ingestion (cron, EC2, Python, PostgreSQL, email alerts; ~4 min per run) and designed a file-lock lease protocol so 3 scheduled jobs share one EC2 instance safely.

Better Technology Labs LLP Jun 2025 – Jul 2025
Software Engineer Intern *Pune, India*

- Developed a Django employee management system with authentication, role-based access and reporting; sped up MySQL batch jobs with multiprocessing.

PROJECTS

Touchstone: Self-Verifying Financial Data Pipeline *Python, FastAPI, SQLite, OpenAI API, pytest*

- Built a verification layer for SEC EDGAR 13F data that proves, auto-corrects or holds each row; caught 5 of 5 planted faults (ticker renames, a 1,302x currency-unit error, stale feeds, amended filings) that a naive pipeline marked healthy.
- Let an LLM agent propose new checks, activated only after AST allowlisting, sandboxed execution, zero-false-alarm replay and human approval; routine runs make 0 model calls.

GeoTrade: Supply-Chain Exposure Map *Python, FastAPI, PostgreSQL/PostGIS, React, Docker*

- Consolidated 29,442 raw listings from 6 stock markets into 23,020 unique, geocoded companies (82,756-alias index, 0 validation errors), served by a 25-table PostGIS schema and a FastAPI service measured at 2–4 ms against a 200 ms budget.

HeyVanilla: Personal Productivity Platform *Next.js 14, TypeScript, Supabase, Docker*

- Built a full-stack app with 15+ modules on a shared, typed realtime data layer, securing multi-user data with row-level security on all 20 tables, session middleware and CSP/HSTS headers.

Campus Placement Portal *Java 17, Spring Boot, JPA, MySQL, JUnit*

- Designed an object-oriented Spring Boot portal for drives, eligibility checks and applications across 6 normalised tables, with role-based access and transactional business rules covered by JUnit tests.

TECHNICAL SKILLS

Languages: Python, Java, SQL, TypeScript, JavaScript, Bash
Backend & Web: FastAPI, Flask, Django, Spring Boot, Node.js, React, Next.js, REST APIs
Databases: PostgreSQL, MySQL, SQLite (SQL); Neo4j, MongoDB, Qdrant (NoSQL / vector)
Cloud & Tools: AWS (Lambda, EC2, S3, Fargate), Docker, Linux, Git, cron, pytest, Selenium, LLM APIs (OpenAI, Anthropic), AI coding tools
Fundamentals: DSA, OOP, DBMS, OS, Networks | **Certified:** HackerRank SQL, freeCodeCamp Web Design
