Education

Vishwakarma University — Pune, MH
Bachelor of Technology in Computer Engineering; CGPA: 7.77 (through Semester 6) — *2023 to 2027*

Experience

Software Development Intern, Data and AI — Jul 2025 to Present
BuySellTips Financial Research Pvt. Ltd. — *Pune, MH*

- Built the quality gate for LLM-generated equity research reports covering **US and Australian markets** in **Python** and **PostgreSQL**: a rule engine plus a batched LLM classifier that routes every report section to block, review or publish, catching false claims and placeholder figures before they reach customers.
- Cut LLM calls **26%** by batching and de-duplicating checks, and calibrated thresholds to **halve the human review queue** while improving classification accuracy.
- Own the earnings-call report pipeline (**Neo4j, Qdrant, AWS S3**) and led its **Australian market launch** with a 100% QC pass rate. Cut LLM cost **60%** with vector retrieval and batch runtime about **70%** by sharding work across processes.
- Shipped a 10-Q peer-benchmark report product for **US-listed companies** from spec to production in about 2 weeks, using SQL peer selection and cached per-filing extraction to keep model spend low.
- Raised the earnings-calendar match rate from **23% to 96%** across **1,200+ companies** in US and Australian markets with a 3-source fallback (vendor data, Nasdaq API, per-company lookup).
- Debugged recurring overnight data corruption through database forensics and cron and timezone analysis, tracing it to an undocumented **AWS Fargate** scraper; added de-duplication that eliminated wrong-year dates.
- Replaced a fixed-sleep orchestration step with result polling and retries, **eliminating daily missing-filing rejections**.

Software Engineer Intern — Jun 2025 to Jul 2025
Better Technology Labs LLP — *Pune, MH*

- Developed a **Django** employee management system with authentication, role-based access and reporting, and sped up MySQL batch jobs with multiprocessing.

Projects

Serverless Bond-Price Pipeline | *Python, AWS Lambda, Docker, Selenium, PostgreSQL* — *Work project, BuySellTips*

- Fans pending US bond CUSIPs out in batches to async **AWS Lambda** functions running containerised headless Chrome to collect daily FINRA price and yield data, with idempotent upserts so re-runs are safe.

On-Demand IPO Ingestion on AWS EC2 | *Python, AWS EC2, Bash, cron, PostgreSQL* — *Work project, BuySellTips*

- Cron starts an **EC2** instance, loads and enriches new NASDAQ IPOs into PostgreSQL, stops the instance and emails a run report, with a flock-based lease so multiple jobs share the instance safely and it only runs (and costs) when needed.

Touchstone: Self-Verifying Financial Data Pipeline | *Python, FastAPI, SQLite, OpenAI API, pytest*

- Built a verification layer for SEC EDGAR 13F data that proves, auto-corrects or holds each row, catching **5 of 5 planted faults** (ticker renames, a 1,302x currency-unit error, stale feeds, amended filings). LLM-proposed checks go live only after AST allowlisting, sandboxed replay and human approval.

GeoTrade: Supply-Chain Exposure Map | *Python, FastAPI, PostgreSQL, PostGIS, React, Docker*

- Consolidated **29,442 raw listings** from 6 countries' exchanges into **23,020 unique, geocoded companies** (0 validation errors), served by a 25-table PostGIS schema and a FastAPI service measured at 2–4 ms against a 200 ms budget.

HeyVanilla: Personal Productivity Platform | *Next.js 14, TypeScript, Supabase, Docker*

- Built a 15+ module full-stack app with row-level security on all 20 tables, session middleware and CSP/HSTS headers.

Technical Skills

Languages: Python, Java, SQL, TypeScript, JavaScript, Bash | **Core**: DSA, OOP, DBMS, OS, Computer Networks
Backend and DBs: FastAPI, Flask, Django, Spring Boot, Node.js, Next.js, PostgreSQL, MySQL, Neo4j, MongoDB
Cloud and Tools: AWS (Lambda, EC2, S3, Fargate), Docker, Linux, Git, pytest, Selenium, OpenAI and Anthropic APIs
