Education

Vishwakarma University — Pune, MH
Bachelor of Technology in Computer Engineering; CGPA: 7.77 (through Semester 6) — *2023 to 2027*

Experience

Software Development Intern, Data and AI — Jul 2025 to Present
BuySellTips Financial Research Pvt. Ltd. — *Pune, MH*

- Own the production pipeline that converts SEC filings and earnings-call transcripts into published equity research for **US and Australian** listed companies, orchestrating parallel **AWS Lambda** workloads over **Neo4j, Qdrant and PostgreSQL** on a daily schedule.
- Led the **Australian (ASX) market launch** end to end, diagnosing 4 root causes that had silently halted earlier runs, extending the pipeline to half-year and annual reporting cycles, adding QC-gated human review, and cutting LLM cost per report **~60%** with vector retrieval.
- Designed and shipped a 10-Q competitive-intelligence report product for **500+ US large-cap companies** from spec to production, using SQL peer selection, rule-based pre-screening that avoids wasted LLM spend, and a content-hash cache that makes re-runs **~90% cheaper**.
- Built an automated LLM quality gate that reviews **100% of reports** instead of samples, combining 14 deterministic rules with a 57-question classifier; raised accuracy from **81% to 90%** on a labelled test set and **halved reviewer workload** at ~$0.01 per report.
- Rebuilt the earnings-calendar service across **6 countries** (US, Australia, India, UK, Germany, Canada), raising match rate from **23% to 96% across 1,200+ companies** with a 3-source fallback and removing ~27K stale records per run.
- Root-caused recurring data failures, including fiscal-year mismatches between services, a retry deadlock and an undocumented **AWS Fargate** job corrupting data overnight; shipped idempotent fixes and uncovered that **87% of stored transcripts were empty**.

Software Engineer Intern — Jun 2025 to Jul 2025
Better Technology Labs LLP — *Pune, MH*

- Developed a **Django** employee management system with authentication, role-based access and reporting, and sped up MySQL batch jobs with multiprocessing.

Projects

Shared EC2 Scheduler | *Bash, flock, AWS EC2, cron* — *Work project, BuySellTips*

- Designed a lease-based scheduler that lets 3 daily jobs share one **EC2** instance without conflicts and stops it within 30 min of going idle; validated with **60 concurrent interleavings** and zero violations.

Serverless Bond-Price Pipeline | *AWS Lambda, SQS, EventBridge, ECR, PostgreSQL* — *Work project, BuySellTips*

- Built a queue-driven pipeline collecting daily FINRA price and yield data for US bonds using container **Lambdas**, **SQS** with a dead-letter queue, and transactional batches so retries never duplicate data.

Touchstone: Self-Verifying Financial Data Pipeline | *Python, FastAPI, SQLite, OpenAI API, pytest*

- Built a verification layer for SEC EDGAR 13F data that proves, auto-corrects or holds each row, catching **5 of 5 planted faults** (ticker renames, a 1,302x currency-unit error, stale feeds, amended filings). LLM-proposed checks go live only after AST allowlisting, sandboxed replay and human approval.

GeoTrade: Supply-Chain Exposure Map | *Python, FastAPI, PostgreSQL, PostGIS, React, Docker*

- Consolidated **29,442 raw listings** from 6 countries' exchanges into **23,020 unique, geocoded companies** (0 validation errors), served by a 25-table PostGIS schema and a FastAPI service measured at 2–4 ms against a 200 ms budget.

HeyVanilla: Personal Productivity Platform | *Next.js 14, TypeScript, Supabase, Docker*

- Built a 15+ module full-stack app secured with row-level security on all 20 tables, session middleware and CSP/HSTS headers.

Technical Skills

Languages: Python, Java, SQL, TypeScript, JavaScript, Bash | **Core**: DSA, OOP, DBMS, OS, Computer Networks
Backend and DBs: FastAPI, Flask, Django, Spring Boot, Node.js, Next.js, PostgreSQL, MySQL, Neo4j, Qdrant, MongoDB
Cloud and Tools: AWS (Lambda, EC2, S3, SQS, EventBridge, ECR, Fargate), Docker, Linux, Git, pytest, Selenium, LLM APIs
